Few Phases of Ensilage Discussed in th

Annual Congress.

New York Sun. Seventy-five farmers interested in pre serving summer growths green and juicy in winter met yesterday, in the third annual Ensilage Congress, at 55 Beekman street. Ensilage has been tested in this country for five years. The object of the annual meeting is to compare experience and results. As an art, ensilage is yet in its infancy. It was practiced first in system has enemies who insist that the preserved grass or corn spoils the milk, and that, being in the first stage of fermentation, it must eventually undermine

the health of the cattle.

Edward Gridley, of Wassaic, N. Y.,
gave an account of the difficulty the
Wassaic farmers had with a New York wassaic farmers had with a New 10rk condensed milk company which had its factory near Wassaic. Milk was furnish-ed to this factory by farmers from a great distance around it. In 1880 three fartoom, but nothing to equal the incident mers experimented with silos. Milk increased in quantity, and milk inspectors at the factory tried in vain to detect something wrong in it. They pronounced the milk good. In 1881 eight additional silos were made, and in 1881 and Mrs. Frelinghuysen was to have stood third, but she was not well enough to come to the White House to take a posi-tion below the wife of the Speaker. The 1882 a great deal of milk was furnished to the factory from cattle fed on ensilage, Miller. She is the wife of the senior and no fault was found. In 1882 four more siles were built. There were then Justice of the Supreme Court. The Supreme Court people have always held that they should rank the Cabinet, and when Mrs. Miller, who had just left a ladies' lunch party, where she had been more siles in Wassaic than in any other part of the country in a territory of simlar extent. In February, 1883, the milk was refused at the factory. The farmers were told that some milk which came the centre of a group of prominent la-dies, arrived and discovered this arrangefrom cows fed on ensilage had been condensed by itself, and it was found condensed by itself, and it was found that the milk would not remain fit for ment she was very much annoyed by it. In one way she resembles her husband. consumption as long a time as other milk. She has a habit of speaking her mind when excited, regardless of her surroundings or the occasion. She began her protest by saying that she had been at the White House since Mrs. Lincoln's time. In all that period she had never been outranked by the wife of the Speaker, It was asserted, too, that New York con-sumers complained that they could taste something bad in the milk. The President of the milk company offered to furnish the usual food for cows if farmers would not fill their siles last summer, and and she thought it was pretty late in the day for anything of that sort. refused to make contracts with them from October 1, 1883, to March 31, 1884 day for anything of that sort.

These remarks were addressed to Mrs.
McElroy, who, being a very modest,
timid woman, was overwhelmed with
embarrassment. The other ladies looked if the farmers filled their silos. Corn had been planted when this prop-

osition came from the condensed milk company, and farmers permitted the question to remain open until the time came for them to decide whether to fill When that time arrived seven to remain empty. They are empty yet. The speaker was one who refused to yield to the condensed milk company. He had bought thirty steers and was fattening them for market. Dr. Tanner, Mr. Chaffee, and others had done the same. Mr. Gridley thought it a question which was the way to make most money but he thought it was by selling milk However, he was not so certain of that when he found two year old oxen gain two and one-third pounds a day on en-Dr. Tanner of the same town said he

had 150 cows, and after the trouble with the factory he sold 100 of them and took the milk of fifty to New York city. The customers who used the milk did not complain of it. If they did he had hay enough for the cows. B. Rogers of Binghamton, said he fur-

nished the milk of ensilage fed cows to many people in Binghamton. They complained of the milk just after the were opened in winter. Out of three hotels, one had complained.

A resolution was passed asking the

Department of Agriculture at Washington to make an analysis of ensilage milk and of that produced by the ordinary feeding and to publish the result, and also requesting the State Experimental Station of New York to make a similar comparative analysis.

Elder Evans, of the Lebanon Shakers

filled three siles last Summer, and had fed out two of them. Their butter was as good as over. Elder Evans thought that it is easy to make a poor article, but that there is no reason why enclage is not a perfect food. He saw no injurious effect on the cattle,
Prof. Miles of the Amherst Agricultu-

ral College read a paper on the prevention of acidity in ensilage. He said that fer-mentation is the result of a process of vital activity in which microscopic germs are nourished. These germs are called bacteria, and they produce the acidity. If the bacteria could be killed there If the bacteria could be killed there could be no acidity. The way to kill them, he thought, was to fill the silos leisurely, and not put on the weights until the temperature is high enough to prevent its falling below the point necessary to kill the bacteria. This temperature, he had found, was from 115 to 122 degrees. The result, he believed, would be uniformly sweet ensilage.

John Myer, of Mr. Theodore A. Havemeyer's Mountain Side Farm, near Mahwah, N. J., said he fed each of his 100 Jerseys twenty pounds of ensilage in the morning and twenty pounds at night, with seven pounds of hay at noon. With each meal was given also a quart of ground oats and Indian meal. The

the morning and twenty pounds of ensilage in the morning and twenty pounds at night, with seven pounds of hay at noon. With each meal was given also a quart of ground oats and Indian meal. The cattle were never turned out to pasture, and had been fed in this way for three years. Their health is perfect. The ensilage had been taken from sixty three scres of land producing about twenty cons to the acre. Some one asked whether ensilage was

some one asked whether ensilege was good for horses. Dr. Baxter, of Virginia, said: "I fed my horses ensilege for week. So did a neighbor. My neighbor's died. About that time I heard of some mules dying in Kentucky from eating ensilege. Then I concluded to stop feeding ensilage."
Henry Goadwill, of Passaic, said he

had an old horse which he fed on ensi-lage because he didn't care whether the old plug lived or died. It got fat. J. Costigan, of Frederick Bronson's farm in Greenfield Hill, Conn., said he

him, all combined to form a surrounding well calculated to inspire the orator to his greatest effort. He closed his address upon women as follows:

"At the battle of Gettysburg General Pickett was ordered to begin the observed. had fed ten horses for a week past on "At the battle of Gettysburg General Pickett was ordered to begin the charge which was to make him famous. As he went into the terrible battle, his young bride on horseback followed him. When the hail of death was beating down men ensilage, and eight of them died.

The Late Mrs. Jane Perry Butler.

"Richland," the Columbia correspo "Richiand," the Columbia correspon-dent of the Augusta Chrenicle, speaking of the News and Courier's admirable de-sign of securing and publishing aketches of the experiences of Southern women during the war, relates the following:

the mans and cries of the mangled, Pickett suddenly found himself in the presence of his wife. In an agony of fear for her safety, he cried out to her as she sat cool and collected as a veteran, 'Go back! Go back! For God's sake, go to the rear!' 'No,' replied the devoted woman, in the hour of danger a wife's place is at her husband's side."

At this moment through the court Many of your readers will recollect the instance of Gen. Butler's mother taking the oath at Edgefield Court House, and her proud reply to her would be courteous foe. Mrs. Butler's grandfather was a distinguished naval officer; her uncle, Mathew Calbraiah Perry, was a Commodere, and her fether was Commodere. Mathew Calbraiah Perry, was a Commodore, and her father was Commodore Oliver Hazard Perry of Lake Erie fame. Her husband's father was a gallant army officer of the Revolution. Her husband was a captain in the regular army prior to the late war and served his country faithfully, whilst one of his brothers was a United States Senator and another Governor of South Carolina. Mrs. Butler, being a widow, found it necessary for the proper transaction of some legal matters to take the hated oath. The officer who presented her to the commancry, which nearly lifted the excited throng to its feet. It was the old Robel "yell," heard upon a hundred battle fields and never to be forgotten. A deep silence followed. All eyes were turned toward the outer circle. Then Judge Roney's cold voice was heard bidding the Sheriff to arrest the offender. A man was seen dodging in the crowd, and the Judge said:

"The man who is leaving is probably the one wanted!" officer who presented her to the comman-der of the post, thinking to win favor for her with the little despot of an hour, began to give him a list of the distinguished men with whom the was allied. The noble lady stopped him and said: "I prefer to be known as the mother of Gen. M. O. Butler, of the Confederate arms."

—A medical student says he has never been able to discover the bone of conten-tion; and desires to know if it isn't the jaw-bone.

"Rough on Coughs." Knocks a Cough or Cold endwise. For children or adults. Troches; 15c. Liquid, 50c. At druggists.

POUTING FOR PLACE. Row Among the Ladies at a White Hous

Another theory to account for mysterious boiler explosions has recently been WASHINGTON, February 1.—People who called at the White House last Saturday afternoon were deeply impressed made by Prof. Donny, of Ghent, and with the majestic, almost imperious man-ner of Mrs. Justice Miller, who stood third in the line from Mrs. McElroy which is certainly deserving of critical examination. The theory is based on the during the reception. There was a high rosy flush upon Mrs. Miller's face, and her black eyes fairly snapped. Strangers unfamiliar with Mrs. Miller's manners Engineer: presence or absence of air in the water, and is thus described in the American were much impressed by her stately In this experiment ordinary water is brusqueness as they were presented. It was noticed that whenever a friend of Mrs. Miller appeared she talked in a end, and boiled long enough to drive away

frightened, with the exception of Mrs. Carlisle. She remained very quiet, look-

ing straight ahead of her, utterly ignor-ing what was said. This appeared to add fuel to Mrs. Miller's rage. Catching the wife of the Secretary of War by the hand she said: "Come, Mary Lincoln, you

come here and stand between me and

Mrs. Carlisle, for I will never stand next

to her." Mrs. Lincoln is one of the most timid and modest of women. She

could do nothing but submit to the im-perious display of temper, and so this

accounts for her being next to Mrs. Car-lisle on that eventful afternoon. Mrs.

Miller did not let the matter drop when

she had taken the next place, but kept

turning to the ladies beyond her, asking

what they thought "of this proceeding?"
What these ladies thought they did not

venture to say.

This unusual incident accounted for

the high color in the faces of the ladies receiving, and also for the excessive cor-diality with which they pounced upon

the first visitors that came in. It may

also have accounted for the agitated manner of Marshal McMichael, who was

so thoroughly amused with the whole thing that he could hardly get his mind down to the routine work of making

There is nothing in a social way that

has made so much stir in a long time, as the President giving Mrs. Carlislo first

produced and the storm that was to fol-low. Mrs. Frelinghuysen has made such

point about it that at the dinner last

night the Speaker's wife sat below the

ner given in honor of the Cabinet there

was some reason perhaps in this, although

it has been customary in the past for the President to put the wife of the Secretary

of State upon his right and the wife of the Speaker upon his left.

The Rebel Yell in Court.

pear, it became evident about dark that one of the most remarkable forensic dis-

plays ever known in Georgia had been

begun. When the court assembled after tea, the seats and the aisles within the bar were crowded with ladies, while with-

out a dense throng of men filled up the auditorium. It was before this assembly that Mr. Twiggs began his argument at 8 o'clock. Twiggs is an eloquent speaker, practiced in and noted for oratorical

graces. In the course of his three hours' address, he at one time referred in the

most feeling manner to the courage and devotion of woman. The hour, the oc-

casion, the audience and the dim light, from which the rapt faces were bent upon

on all sides, and the plunging shot and shell mingled their fierce screams with the moans and cries of the mangled,

At this moment through the court

"No, Judge," exclaimed a voice slowly,

room there rang out one wild thrilling

the one wanted!"

"I am the man!"

A singularly dramatic incident curred Friday, near midnight, in the Superior Court room at Waynesboro, during the trial of the Rogers brothers,

presentations.

placed in a clean glass tube, open at one France, in 1873, on a large scale, and was adopted in America in 1878. The there were looks of amusement or emthere were looks of amusement or emwater. Then, when the upper part of according to their disposition, as they filed by. The reasons for this has since the tube is full of pure steam, the mouth been explained by Mrs. Miller herself at is hermetically sealed and the tube left several up-town receptions.

It is the custom for ladies invited to of water, above which is vapor of water assist at receptions at the White House to take their places in line as they are in a very low pressure. The tube being He is now at the most favorble point for assigned. There have been many dis- thus prepared, its lower end is plunged putes heretofore over the exact place in a bath of glycerine or oil, which is turned so that the opening between the ertain ladies were to occupy in the Blue gradually heated. No ebullition is visible in the tube when the temperature of last Saturday. Mrs. McElroy was the first lady to take her position. She in reaches 130°C. (234°F.) At 138° (240°F.,) vited Mrs. Carlisle to stand next her. however the column of water burst, as it were, in two with a sudden explosion, and part of it is flung against the sealed The end with such force as often to break it third place was then assigned to Mrs. open.

Effects of Air on Boiler Explosions.

Now, in industrial works it often happens that a boiler, having sbeen filled with water, works for three or four hours without receiving a further supply; it sufficiently high. But the water in such a boiler will be in the same condition as that in the test tube, i c., it will be deprived of all air and consist of water ! low and vapor above, the latter, however being probably at a much higher pressure than that of the water in the tube. This water has no free surface in its inplace. Consequently, as in the test tube, there will be delay in vaporization, at least until the expansion becomes great superincumbent vapor, and then a sudden flashing into steam, which will be of the nature of an explosion, and may easily overcome the resistance of the be very great. In the test-tube the press-C.) will be 86 times what may be taken as pressure will probably be much higher, and the pressure of the explosion will

probably be much higher also. Four cases of explosion are cited as examples of this mode of action. The first was at the mines of Hardinghem, where, during the putting in of some pumps, it was often necessary to stop the engine and bank up the fires for a time. It had been noticed when this took place the pressure was very slow in rising after the resumption of firing. On one occasion, when this delay in recovering the pressure had been very long, the enplace on New Year's Day. Of course he gineer, M. Obe, actually had his eye on had no idea of the effect that would be the pressure guage, when he saw the needle first vibrate sharply and then rise by rapid steps to a very high pressure. At the same moment there was a dull roar within the boiler, a slight shaking of the ground, and the safety valves opened wide, emitting clouds of spray

> minutes before the cylinder and steam will be able to make a strong case for his nines were filled by a rush of priming pipes were filled by a rush of priming water, a dull sound was heard, and there was a tremendous outburst from the safety-valves. Here, again, no special cause could be discovered for the occurrence, which may fairly be set down to the cause here stated.

In another case, at Roanne, the boiler had been filled up an hour before stopping for dinner. When the time came to resume work the fireman found the water-level and pressure as they should be, and started accordingly, but in twenty minutes a serious explosion occurred. Lastly, at Cusset, a boiler still hot from the work of the day before, was fired up at 5.30 A. M., and exploded one hour after with terrible violence. In both cases subsequent inquiry failed to reveal any special cause for the disaster, for which the present theory seems to offer

the best explanation. To avoid this source of danger it will be sufficient, as M. Vignes points out, to make it a rule always to feed a boiler when it is first fired up after standing. This will have the double effect of lowering the pressure and of facilitating evaporation by distributing the mass of water in the beiler and charging it to some extent with bubbles of air. Meanwhile, the facts he has adduced are certainly sufficient to warrant a belief that we have here a key to many cases of boiler explosions which have hitherto been wrapped in mystery.

Useless Fright.

To worry about any Liver, Kidney or Urinary Trouble, especially Bright's Disease or Diabetes, as Hop Bitters never fails of a cure where a cure is possible We know this.

- Mr. Jno. F. Hobbs, formerly of Lexington, who led a fruitless indepen "I am the man!"
The speaker stood in the alste with folded arms, quietly viewing the Bench.
"I shall have to fine you \$10, then, for disturbing the court!"
"Very well, your Honor; I will pay the fine," said the man without moving, "but I meant no disrespect; I was a Confederate soldier at Gettysburg, and just could not keep from hollering!"
The ladies present sprang to their feet, and almost instantly the money was made up and paid to the Clerk. The involuntary yell of the old soldier was an irresistible tribute to womanhood. Had the fine been ten times as large he would not have suffered.—Macon Telegraph.

Lexington, who led a fruitless indepen dout canvass in the election of 1880, has had an interview with the Newberry Herald. He states that he is now conscious that he acted foolishly and that there should be no opposition to the Democratic party in this State by respectable men, the best way to fight Bourbor-sim being inside the party ranks. His action in 1880, he says, was an error of youth into which he was beguiled by leading Democrats who promised to follow him in a general liberal movement in the State and deserted him under fire. He has been traveling in Australia and the Holy Land for the last four years, and is now going to Atlanta to practise liw: February Skies.

It is full dress with the planets, moon and stars this month. Never was a more of her blessed little youngster! advanced in the Journal de France, in brilliant spectacle in the skies than is which attention is drawn by experiments presented now by the heavenly procession. Venus has been seen for a month sending her lovely rays through the deep red glow of our wonderful sunsets. She reigns supreme as evening star in the West, as it is meet she should do, in the month that contains the extra leap year day. She reaches her declination on the 11th, being then 14 degrees North of the sunset point.

But while Venus reigns alone in the West the East is filled with a long procession of astronomical and mythological celebrities. First comes Saturn, the father of them all, who shines with steady and serene countenance between the fiery Aldebaran and the Pleiades observation, being near the sun and rings may be plainly seen. It will be thirty years before such an opportunity of examining him occurs again, and he is therefore now the favorite eynosure of Next to Saturn comes Jupiter, his royal

is far the most brilliant object in the and cannot do so. Western sky. Following him at a respectful distance, and a little to the North, is ruddy Mars, who has just passeed one of his most interesting and characteristic may then be cooled down, and the next stages-opposition. The earth is now time it is wanted it may very probably almost directly between him and the sun, be fired up again without starting the and the distance between him and the feed-pump, the water-level being judged earth is nearly 60,600,000 miles. He is not particularly brilliant now, as he is almost in aphelion, and we almost in perihelian. Neptune, the outpost of our system, is evening star, but as he cannot be seen without a powerful telescope, he is of no particular interest to us. The clusive Mercury is morning star, and you may catch him if you can about the 13th, terior, due to the presence of bubbles of when be will be visble, if at all, about air, from which evaporation can take an hour before sunrise, near the Southern horizon. The moon is full on the 10th, near

midnight. She is then quite close to enough to overcome the pressure of the Mars, and on the previous evening will pay her respects to Jupiter in passing.

But not only are the planets at their best this month; the fixed stars also are on parade. The gorgeous Orion, preboiler. The pressure thus attained may ceeded by the Pleiades and Hyades, and followed by the glorious monarch of all. ure at the temperature of explosionn (130° Sirius, is overhead, South of the zenith, The twins, Castor and Pollux, are not far the pressure of the superincumbent vapor off, and Procyon still sustains his corner in the boiler, as already observed. That of the giant triangle of which Sirius and Betelgeuse are the other apices. Toward the North, almost overhead, is Capella, second only to Sirius in brightness, now that Arcturus is gone into the West. The Great Bear we have always with us, revolving around his axle, Polaris.

Hereditary Insanity.

Hereditary Insanity is the most terrible disease that can be transmitted from parent to child. It often remains laten and unsuspected, however, for a generation, or perhaps longer, and then only manifest itself in a single member of a household, and is set down to personal idiosyncrasy. Like fire to gunpowder, any calamity which appeals intensely to the brain is liable to ignite the fires of madness. A strange case of this kind is reported from Halifax. One member of the family, Roger Amer, is in jail at Boston, awaiting his trial for murder. This so worked upon the brain of a married sister that she had to be conveyed to a lusane at his residence near Dighy, N. Sane at his residence at his had he also will have to be confined in an asylum. In a little while a younger sister to the alloyed murk as now promption in the sunmany have been through the also will have to be confined in an asylum. In a little while a younger sister to here also will have to be confined in an asylum. In a little while a younger sister to the the call be are now a maniac. Thus three nembers of one family have lost three alloyed murker as not necessary to the Cont of Common Pleas, at Anderson C. H. Sc. In the Cont of Common Pleas, at Anderson C. H. Sc. In the Cont of Common Pleas, at Anderson C. H. Sc. In the Cont of Common Pleas, at Anderson C. H. Sc. In the Cont of Common Pleas, at Anderson C. H. Sc. In the Cont of Common Pleas, the Cont of Common Pleas, the C natic asylum. Soon afterward the brothbers of his family who are now insane, they can trace the disease back to his father or mother or their families.—
Brooklyn Eagle.

- dentist was asked whether gentlemen or ladies gage him the most trouble, and he reptied, "O, gentlemen, beyond question. I operated upon a greet many officers just before they went to the recent War, and I assure you that many of them who are now neroes behaved in a very unheroic way indeed in the chair in which you are sitting. Women scream a little, but are always ready to thank me for what I do for them. Men moan, and groan, and abuse me."

- "Dar is many a rule," says Uncle Sam, "wat won't work bofe ways. Whis-ky will produce a headache, but a head-ache won't produce whisky."

TORPID BOWELS,

DISORDERED LIVER,
and MALARIA.

From these sources arise three-fourths of the diseases of the human race. These symptoms indicate their existence: Loss of Appetite, Bowels cositive, Siek Head-acke, fuliness after cating, aversion to exertion of lood, irritability of temper, Low spirits, A feeling of having neglected some duty, Dizziness, Fluttering at the Heart, Dots before the eyes, highly colored Urine, CONSTIPATION, and demand the use of a remody at the Heart, Bots before the eyes, highly colored Urine, CONSTIPATION, and demand the use of a remody prompt; removing all impurities through these three "seavengers of the system," producing appetite, sound digestion, regular stools, a clear skin and a vigorous body. A REALLY PURE STIMULANT.

THIS WHISKEY is controlled entirely by VENABLE & HEYMAN, New York. It is distilled in Maryland in the

slate water regions of that State from the small grain grown there. The distillation is superintended by a gentleman who thoroughly understands his business.

thoroughly understands his business.

Nothing deleterious is permitted to enter into its composition, and none of it is allowed to be sold until fully three years old, in order that it may be entirely free by evaporation from fusel oil. Venable & Heyman offer these goods as perfectly pure, to fill a long felt want for medical purposes. It is their own brand, and they stake their reputation on the truth of this assertion.
